COURSE OF STUDY.

GRAMMAR SCHOOL.

FIRST YEAR.

Arithmetic.
Grammar.
Geography.

SECOND YEAR.

FIRST TERM.....
- U. S History.
- Physiology.
- Arithmetic.
- Grammar.

SECOND TERM. .....
- U. S. History.
- Grammar.
- Arithmetic.
- Physiology—6 weeks.
- Physical Geography—6 weeks.

THIRD TERM.....
- U. S. History and the Constitution.
- Rhetoric
- Arithmetic.
- Physical Geography—Guyot.

ACADEMIC DEPARTMENT.

FIRST YEAR.

FIRST TERM .....
- Latin—Introductory Latin Book—Harkness.
- Algebra.
- Drawing.
- General History.

SECOND TERM.....
- Latin.
- Algebra.
- Natural Philosophy.

THIRD TERM.....
- Latin Reader and Grammar—Harkness.
- Algebra.
- Natural History—Orton.

JUNIORS.

FIRST TERM.....	Latin Reader. Algebra. Geometry.
SECOND TERM.....	Cæsar. Geometry. Chemistry.
THIRD TERM.....	Cæsar. Trigonometry and Surveying. Botany.

SENIORS.

FIRST TERM.....	Virgil—Chase & Stewart. Psychology. Astronomy.
SECOND TERM.....	Virgil. Psychology. Rhetoric.
THIRD TERM.....	Cicero—Chase & Stewart. Political Economy—Gregory. English Literature—Smith's.

REMARKS ON THE COURSE OF STUDY.

Students should bring all the text-books they have.

The studies of the Grammar-School Department and those of the first year of the Academic, together with Natural and Mental Philosophy, constitute our Teachers' Course.

The studies of the Grammar-School Department, together with single and double entry Bookkeeping and Commercial Law, constitute the Business, or Commercial Course.

Careful attention is given throughout the entire course to Reading, Spelling, Writing, and Composition.

COMMERCIAL COURSE.

We give as thorough, complete, and practical a business education as can be obtained at the so-called Commercial Colleges. This course

includes: Bookkeeping in all its forms, Commercial Arithmetic, rapid calculations, contractions, Commercial Law, Business Correspondence, Penmanship, and the customs of business men.

The Principal of the Academy has had many years of practical experience in this work, both in the class-room as teacher and in the counting-room as bookkeeper, and competent young men and women can gain here a thorough training at very small expense.

NORMAL CLASS.

During the Summer Term, special facilities will be afforded to those who wish to prepare for teaching.

PAINTING AND DRAWING

Are taught at a slight extra charge. The work in this department has been very successful during the past year. Twenty-five students have pursued these studies, and at the close of the Spring Term about sixty different specimens, of the work done during the year, (consisting of crayon drawing and oil painting), were on exhibition in Hesperian Hall.

ENGLISH LITERATURE

Is taught during the Summer Term. In this work it is not so much the aim to study the biographies of authors, as to study what they have thought and written.

LATIN LANGUAGE.

Such attention is given to Roman History as is necessary to a complete understanding of the matters read. The study of Latin is pursued as a means rather than as an end, for the drill of mind there is in it, and as contributive to the proper understanding of English. We aim to do what we do well, going carefully into the philosophy of the language and the derivation of the English from it.

SCIENCE.

We aim to make Science a prominent feature in our school. During the Fall Term, Descriptive Astronomy, including a study of the

Solar System, and the pointing out of the principal fixed stars and constellations, is taught. Such students as prove themselves worthy and competent are allowed the use of the telescope in making their own observations. Talks and lectures are given to the entire school, from time to time, on astronomical subjects.

Natural Philosophy and Chemistry are taught during the Winter Term. These subjects are illustrated by daily experiments.

Botany and Natural History are taught during the Summer Term. In Botany it is the intention to analyze, as nearly as possible, all the flowers of the neighborhood. Over one hundred different flowers were analyzed last term. In Natural History, Zoology takes a prominent place. The birds and insects of the neighborhood are studied and classified. The facilities for the study of elementary branches of Science are good.

The Laboratory contains a well selected supply of chemicals, and an Oxy-hydrogen Blow Pipe, for chemistry work. For the study of Philosophy, we have a new Holtze Electric Machine, with numerous accessories, a magnetic Electric Machine, Telegraph Machine, Electric Engine, four Galvanic Batteries, one of which is a four-celled Bunsen Battery, one Air Pump with accessories, a Condenser, Microscope, and a good four inch refracting Telescope. There is a Surveyor's Compass and Chain, for the use of the class in surveying.

We believe in the man who said, "Teach the boys what they will practice when they become men," and we shape the class-room work in everything accordingly. In Arithmetic we look forward to the counting-house; in Grammar, to correct speaking and writing; in Surveying, to field work; in every department of Science, to the experimental and the real; in the Higher Mathematics, in Latin—Psychology, in all things in fact, to that drill of the mind which alone can make it master of the situation—king over time, circumstance, place.

It is the earnest endeavor of the teachers, whatever the subject taught, to *inspire* the student with a love of knowledge. We make no effort to teach everything, but great effort to induce the student to *wish* he knew everything.

MORNING AND GENERAL EXERCISES.

These cover a wide range of topics :—Literature, History, Biography, Science accompanied by experiments, current events of interest; in short, whatever tends to a broad and liberal education.

GOVERNMENT.

"We believe that manhood is more than scholarship, and by every means in our power, we strive to render attractive whatever tends to self-reliance, to industry, to honesty, to self-control, to a patriotic citizenship, to any cardinal virtue, to Christianity—the sum of them all. We believe that he only is governed in any true sense of the word who governs himself. The right is the popular in our school. "If you want men to be worthy of trust, trust them," are the words of a great preacher. This is true, as well, of boys and girls. An appeal to the student's honor, to his higher and better nature, discovers his self-respect, his respect for the rights of others, and serves all the purposes of the school." *D. W. Dennis.*

All students who complete any part of our course will receive certificates of work done, and said certificates will be good, as far as they go, at Earlham College, without further examination; and all students who complete the first four years of our course will be admitted to the Freshman class at Earlham, without further examination.

"The deeper the mind penetrates, the clearer it becomes. The more it spreads itself out on the surface, the more it is confused."

TUITION.

PAYABLE IN ADVANCE.

Tuition for pupils in the Grammar-School Department, $8.00 per term; for all others, $10.00 per term of twelve weeks. No deduction made for absence in the first two or last three weeks. Allowances for sickness are not made for an absence, at any time, of less than one week.

Boarding in private families can be had at about $3.00 per week. Rooms convenient to the school can be obtained, in which students can board themselves at a much less cost than this.

GENERAL ITEMS.

School adjourns one hour in the middle of the week to attend Bloomingdale meeting; students are expected to attend.

Students are expected to attend Sabbath School, and some place of worship on the Sabbath.

They are held responsible for their moral standing, not only while in school, but when away, during their connection with the institution.

Books and Stationery desired can be had at the stores in Bloomingdale.

Students sustain one literary society—Hesperian Band—which meets in Hesperian Hall, every Sixth-day evening; and they have access to two others—The Union Literary, which meets at the academy on Seventh-day evening, every two weeks; and the Shakspere Club, which meets at private houses every Seventh-day evening, for the purpose of studying the works of Shakspere.

"Remember, the power to think, the habit of thinking, and the modes of thinking are of greater value than the accumulation of facts."

TEACHERS FOR 1885-6.

Hiram Hadley and wife are tried, experienced, and successful teachers. The former is the founder of the once noted Hadley's Academy at Richmond, and later of the Hadley & Roberts' Academy, Indianapolis. He has been actively and successfully connected with educational work for many years. The latter is a graduate of Butler University and of The Indianapolis Training School for Teachers, and has had several years of successful experience as Principal of Schools, and teacher in other departments.

Other competent help will be employed as needed. Thus, the Board of Trustees feeling confidence in the ability and experience of faculty, solicit the patronage of the public.
